PW 2 - Tiles and Game Scene

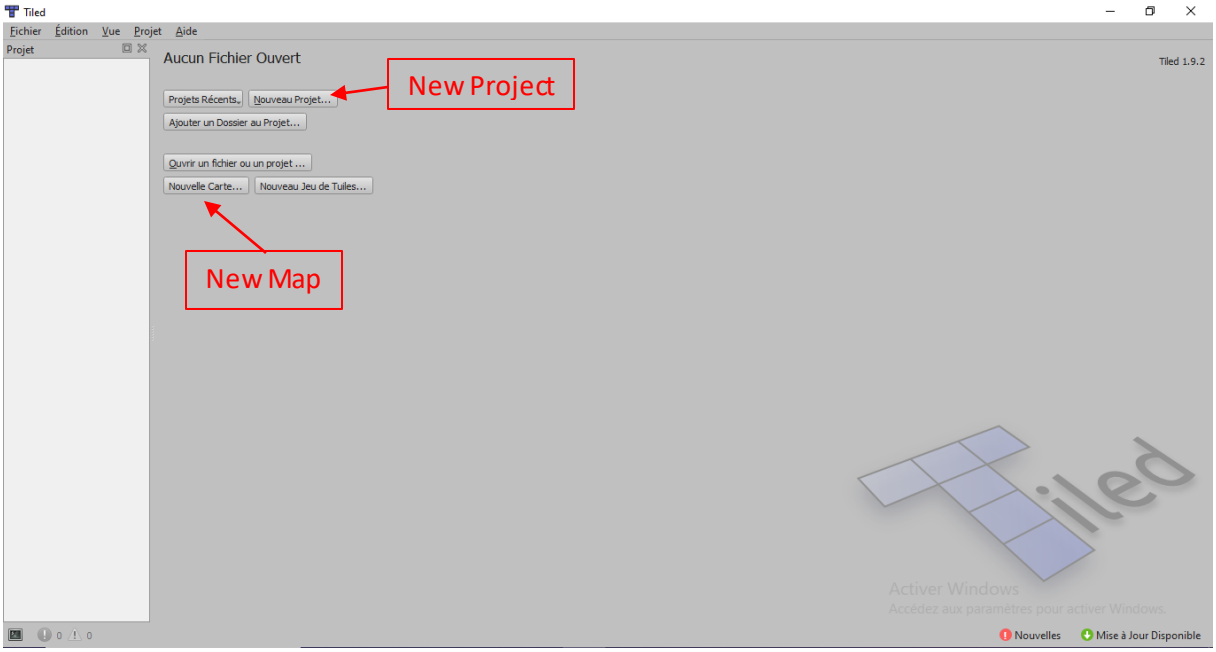

Tile Creation and Visualization:

Goal: Use « Tiled » to build your own game map then display it on HTML page using « Canvas » and Javascript.

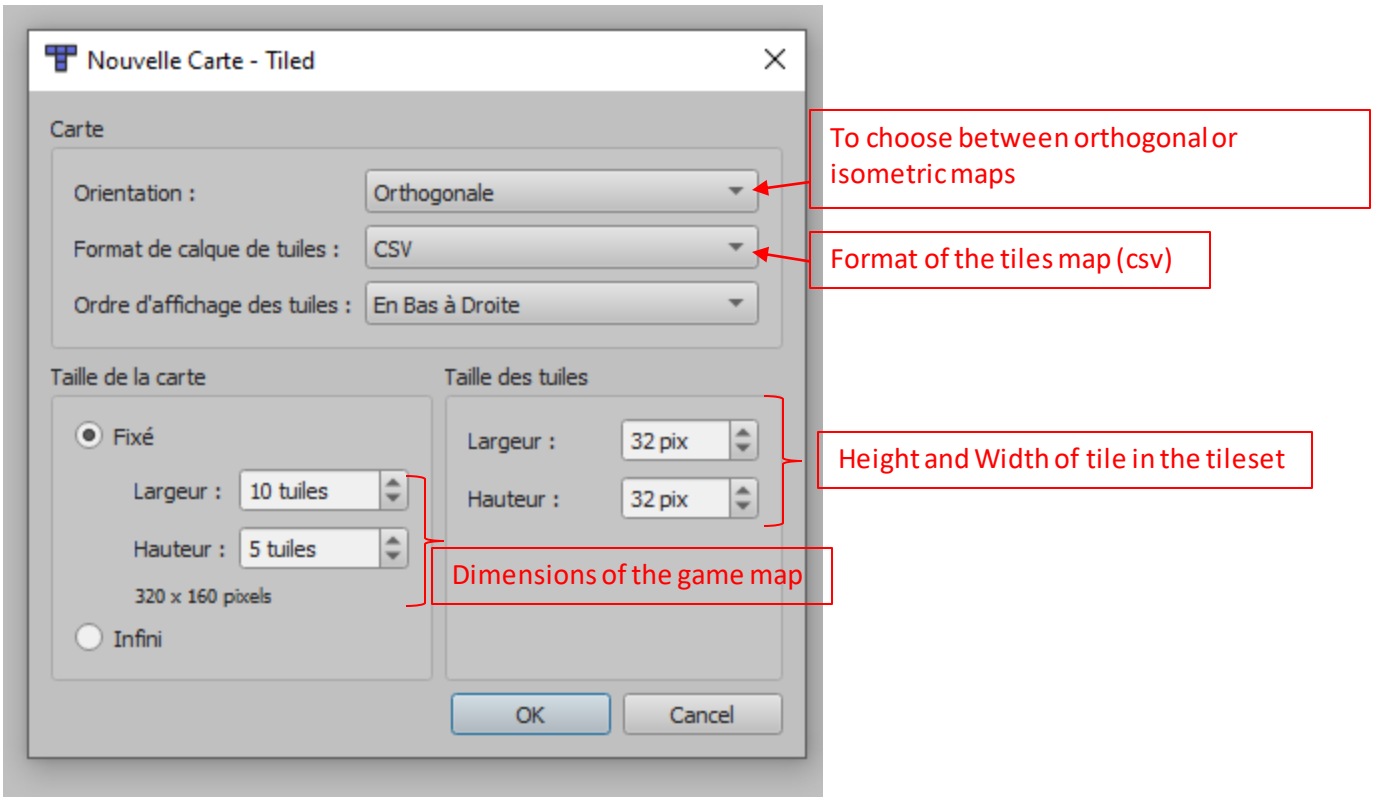

1. Use « Piskel » to draw tiles of your own choice. Export those tiles into a tileset.
2. Import your tileset on « Tiled» to draw a game map. Export the game map into a .csv file.
3. Display your game map in an HTML page using « Canvas » and Javascript.
4. Make the canvas size smaller to visualize only a portion of the game map.
5. Implement tiles scrolling. Use the provided starting code and fill in the missing portions marked *TODO*. Use the comments as guidance.

Tiled

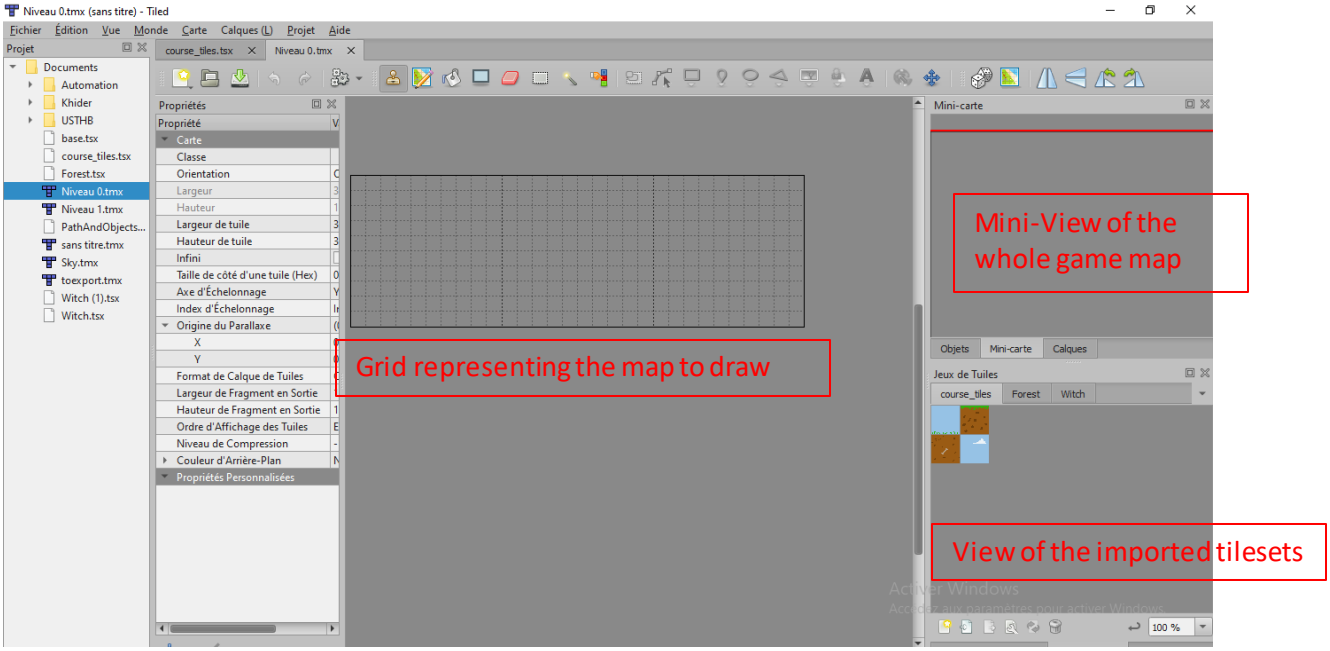

Start interface

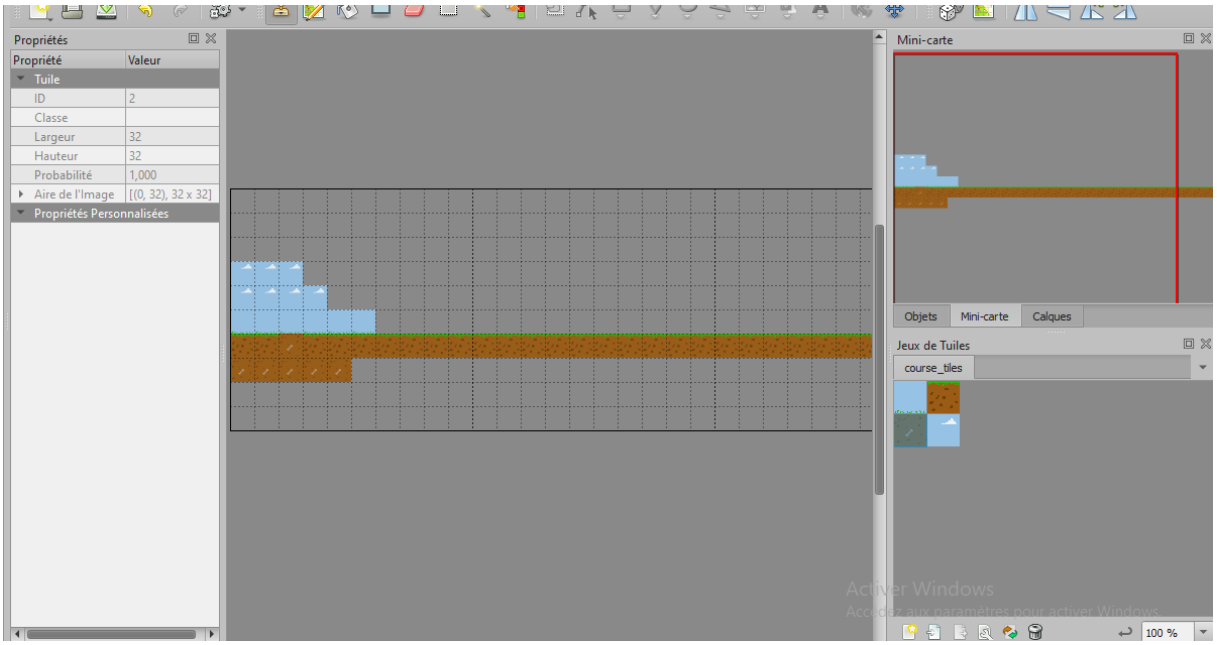

New Map

After creating a map and importing a tileset;

We can draw the game map.

Homework: Combining Implementations to Visualize a Game Scene

Now, using both a sprite and a tilemap, visualize your game scene where the player can move the character around the environment using keyboard arrows.
